

Odour Control Technician

This **1 day hands-on** Odour Control Technician course covers odour sources, detection processes, theory of odour control, equipment, chemical options and applications. The student will learn how to address odours caused from biological sources such as decomposition, urine contamination, and mold, combustion sources such as fire and smoke damage, and chemical sources such as fuel oil spills or volatile organic chemicals.

The course will include information on the following:

- The four principles of odour removal
- Challenges for fire & smoke odours
- Different types of odours and challenges of each type
- Deodorizing agents (Chemicals and types of deodorization)
- Urine decontamination
- Use of fogging equipment
- Odour distinction
- Fire / smoke odours
- Protein odours and their specific challenges
- Deodorization equipment
- Structural / contents deodorization principles
- Microbiological odours (fungi, mycotoxins, bacteria, virus)

This course is a must for contractors, cleaners, restorers and maintenance personnel. The concentration on step-by-step procedures helps bring ease of understanding to solve each and every odour control problem including animal urine and smoke odours. You will learn how to increase profits on deodorization projects as well as matching the control to the source.

Not only does this course address the concerns of urine contamination that plagues most cleaning contractors, but also prepares the insurance repair contractor for handling problems such as fire/ smoke odours, water damage odours, vandalism, as well as death and trauma claims.

****Fee includes: Morning snack, daily lunch and the course manual**
