

CENTER FOR DISASTER RECOVERY

Trauma Scene-Bloodborne Pathogens

2 day CEC Course

Does your company deal with or plan on performing any trauma scene cleanup? If so, are you properly trained?

This class is a must for you!

This class was designed to prepare you for trauma scenes and bio-hazardous decontamination and clean up. It is designed to train you mentally and physically how to deal with a trauma scene in a professional, caring manner in accordance with the outlined standards and guidelines available today.

This class is to allow workers to become aware of the risks involved with the contact of body fluids using controls to minimize and eliminate potential risks.

This is a very intense course, which may not be for everyone.

(For more information, contact our office)

During this you will learn:

- Decontamination techniques and job order
- Worker awareness of potential infection
- Mental preparedness to handle this sensitive situation
- Eliminate risks
- Regulation 833 Control of Chemical or Biological Agents
- Gross filth levels of contamination
- How to create an exposure control plan
- Prepare for entry
- Personal protective equipment requirements
- Understand the legislation
- How to recognize hazards
- Clean up and disposal techniques
- Communication
- Cost efficiency - billing

Who should attend?

Owners, insurance agents, emergency response teams, lab technicians, and the technicians performing the on-site removal and cleanup.

****Being prepared is critical to performing these time sensitive clean-ups.****
