

Water Damage Restoration Technician

Does your company use air movers and dehumidifiers? Do you know how to properly set up and dry a Water Damaged structure? Are you ahead of our industry or behind it?

This **3 day hands-on** Water Damage Restoration Technician course is designed to teach restoration personnel that perform remediation work to give them a better concept of water damage, its effects and techniques for drying of structures. This course will give residential and commercial maintenance personnel the background to understand the procedures necessary to deal with water losses, sewer backflows, and contamination such as mold.

The course teaches the student to dry:

- Categories of water damage
- FOUR mandatory principles of proper restorative drying procedures
- Psychrometry - what is it and how to make it SIMPLE
- How to dry hardwood, paneling, cabinets etc.
- Classes of water
- Hands on monitoring of your water job in a mini structure
- Permeance – just what it is and how does it affect the drying project
- What is the effect of vapour pressure and how do we control it
- How to DRY wall interiors, wood flooring, ductwork, insulation, crawlspaces
- Procedures for handling a clean water loss as well as unsanitary losses
- Learn how to calculate, on the job, how much drying equipment is required and how to set up for effective drying
- Much more including inspection procedures, biocides, microorganisms, drying procedures for carpet, pad, subfloor, wood flooring, walls, crawlspaces and sewage backflows.
- MINIMIZE your liability with knowledge

Don't let old techniques stand in the way of becoming a true water loss professional. This class is packed with information, hands on techniques for class participation and the latest technology. Be a leader today for the property owners, as well as the insurance industry. Advance to the 21st century and become a true Water Damage Restoration professional.
