

Applied Structural Drying

Does your company use air movers and dehumidifiers? Do you know how to properly set up and dry a structure? Are you ahead of our industry or behind it?

This **3-day hands-on** class was designed to prepare you for actual on site action with a real water intrusion in our flood house. The original and first of its kind in Canada, with our house outside, we are able to show the attendees real RESULTS!!

Offering realistic conditions, the Center for Disaster Recovery prides itself on creating profitable and productive employees!

This course helps train the student how to set up to dry the entire structure from top to bottom using various pieces of the most advanced equipment, techniques and methods of drying. The student will perform the necessary steps and calculations required to guarantee their job is dry!

This course will focus on the drying and set up of:

- Hardwood Flooring
- Under pad
- Wall Cavities
- Metal Studs
- Doors/Windows
- Using Psychrometry to make educated decisions in monitoring daily
- Different styles of carpets
- Subflooring
- Crawlspace
- Insulation
- Furnishings
- Extensive monitoring of the jobsite with interactive classroom/jobsite training
- Different installations of carpets
- Contents on site
- Finish Trim
- Extraction Methods

Class participation in all phases of the extraction process and drying techniques.

**Course Fee includes: Morning snack, lunch daily and the course manual.

Please note: *Water Damage Restoration Technician is a mandatory pre-requisite course needed in order to attend the AMRT and/or ASD. Those taking the AMRT and/or ASD course exams must have already attended and passed the IICRC Certified Water Damage Restoration Technician course. Those attendees whom have neglected to obtain this pre-requisite will NOT be eligible to write the exam nor will they be able to gain credit for the course.
