

CENTER FOR DISASTER RECOVERY

Fire & Smoke Restoration Technician

The Fire & Smoke Restoration Technician **2-day** course concentrates on technical and practical procedures for successfully completing the restoration of a fire and smoke affected environment.

Students will learn how to combine various procedures with a practical approach to managing the job site and how that relates to job site cleanliness, odour removal and overall job completion.

You will learn:

- General concepts and technical terminology
- Structural restoration and deodorization methods, choices and techniques
- Contents cleaning and deodorization
- Contents Pack-outs & processes
- Equipment and chemical choices and their application
- Components of soot and smoke residue
- Management and staffing needs
- Safety expectations
- Understanding fire classes and the damage they cause
- Cleanup methodology
- Ultrasonic techniques – what can and cannot be processes

Today, many companies are still geared toward tear out and replacement rather than mitigation and restoration in fire and smoke losses. Most property owners are not aware that these cleaning and mitigation services exist, so learn how to market your services within the industry. This will place you above your competition and put you into a win-win situation within your company, the insurance carrier and the property owner!

****Course Fee includes: Morning snack, lunch daily and the course manual.**
